

A clear next step.

Familiar controls, quieter surfaces and enough room for the message.

SHORT MARKETING MESSAGE

Start with one useful task.

Find a tool that fits the work.

Explore tools

Quiet by default.

A strong primary action. An open reading surface. Detail only where it helps someone decide.

Explore tools →

Read the docs

01 / NAVIGATE

Keep familiar labels and a visible current location.

02 / ACT

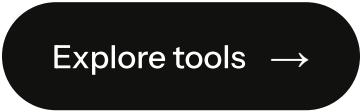

Give every action a clear priority and a complete set of states.

03 / READ

Use direct text for an invitation; a reading panel for detail.

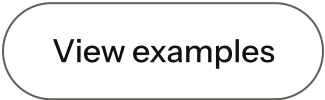

Make the main action obvious.

One strong action. Supporting choices stay quieter.

Unavailable / choose a tool first

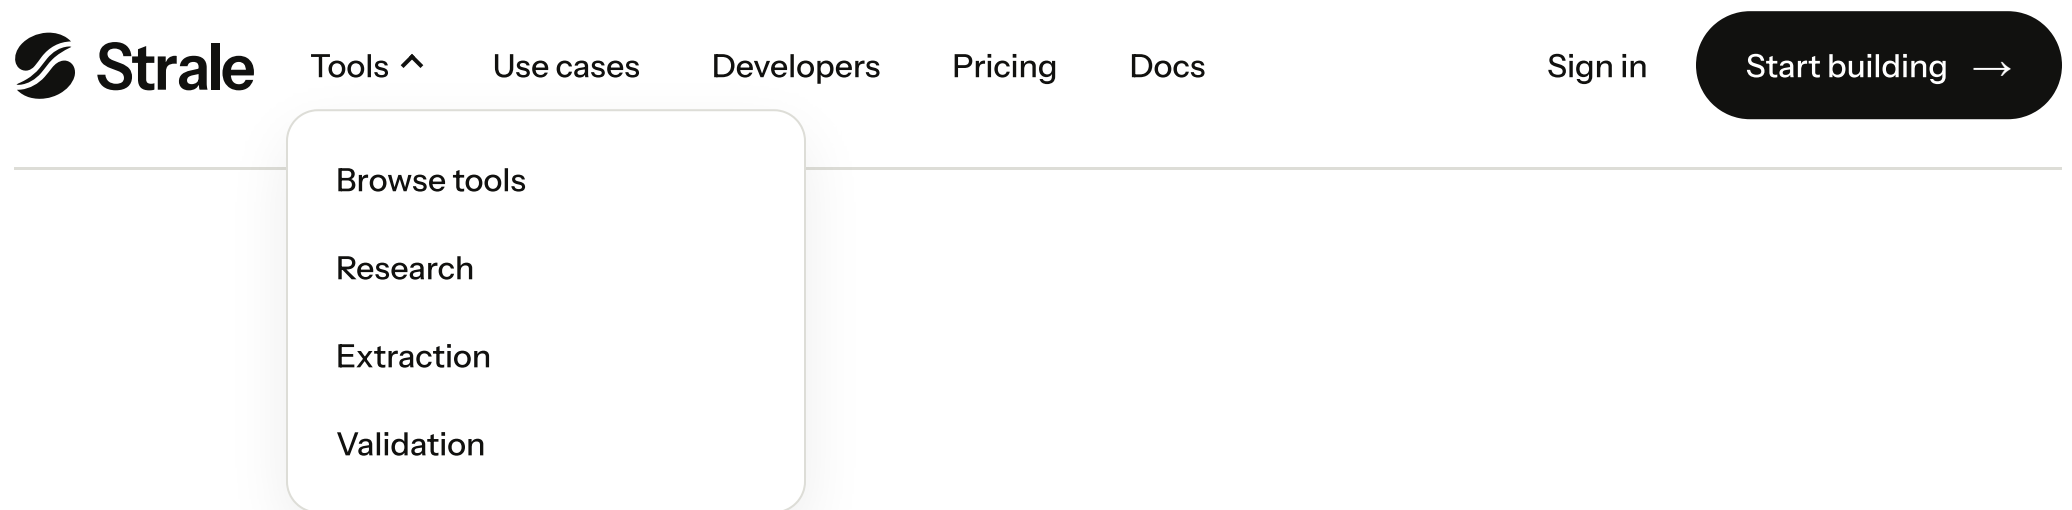

Load example

Try loading a local fixture. No API request.

Use links for destinations and buttons for actions. Keep labels short, preserve the label while loading, and explain why an action is unavailable.

A calm way through the product.

Primary navigation introduces the site. Secondary navigation locates the reader within a topic.

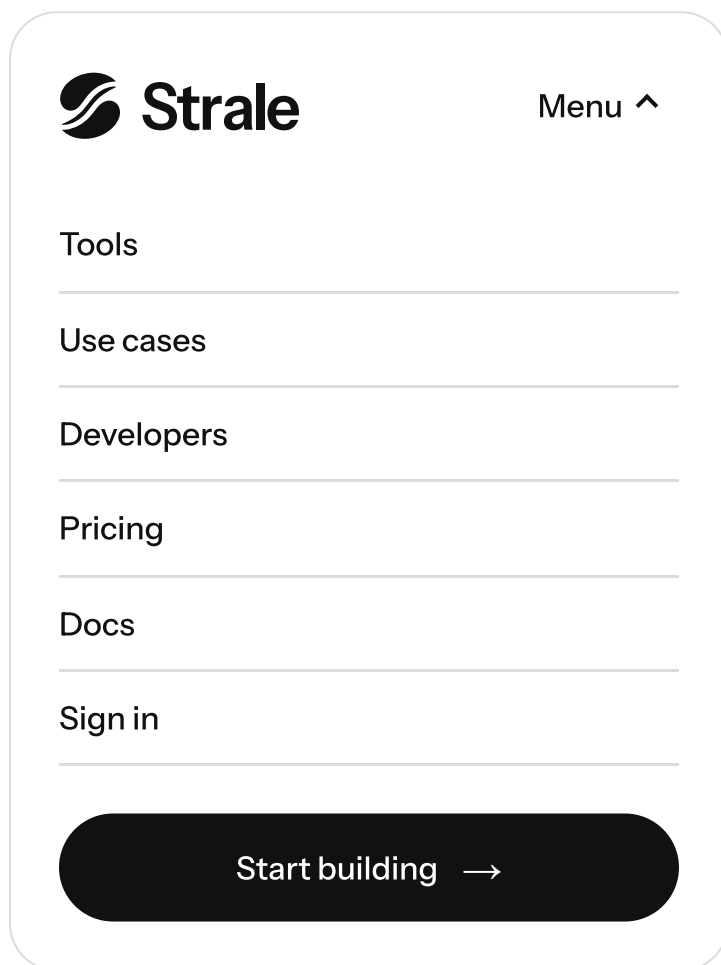

Within a topic

Overview Examples States

Dropdowns open on activation, not hover. Tab follows ordinary links; Escape closes an open disclosure and returns focus to its trigger.

Give small screens room.

The same labels and hierarchy, with an inline menu that opens below the header.

SAME IDENTITY

Less space. The same clarity.

The logo stays at its tested minimum width. Navigation opens in the page, with readable labels and generous targets.

Behaviour to try

Open with Enter or Space. Tab through the links. Escape closes the menu and returns to its button. Tabbing out closes it too.

At narrow widths, the desktop example above uses this same pattern.

Keep controls at least 44px high. Allow labels to wrap. The mobile menu is a disclosure, not a modal; it never traps focus.

Let the content choose the card.

A short invitation, a useful tool, and an inspectable result need different compositions.

Put a useful tool to work.

Start with a task your agent already needs to do.

Disposable No

[View details](#)

Result / a light panel for structured detail.

Use a single link for a discovery card. Use contained actions for a result.
Never nest interactive targets or add a panel just to hold a heading.

Make every state understandable.

State changes should explain what happened and what comes next.

SUCCESS / DESIGN FIXTURE

Example ready.

Show a concise outcome and let the person continue.

ERROR / DESIGN FIXTURE

Text carries the meaning.

Colour reinforces success or error. It never supplies the only explanation. Loading and retry examples announce their outcome.

Use text alongside status colour. Keep unavailable controls legible, announce asynchronous outcomes, and remove decorative motion when reduced motion is requested.

Local component specimen. Links announce their intended destination here.

Motion stays restrained.

Only colour changes transition. Controls do not jump or grow. Reduced motion removes the transition.
