Start with the question.

A useful document gives the reader a clear route through the information. State the purpose, show the supporting material, then explain what it means.

Let structure do the work.

Use short paragraphs for connected ideas. Keep tables for comparisons, and reserve code styling for exact technical content. A new box is not needed for every thought.

Emphasis should help a reader find the important point. The text remains selectable and the font is embedded in this PDF.

Keep evidence readable.

Introduce supporting material before asking the reader to interpret it. A clear label explains what a value represents. A short note can distinguish an example from an observed result without crowding the main text.

When several items share the same structure, use a table. Keep the headings brief and let consistent alignment make the comparison easier. Avoid turning each row into a separate card.

Element	Purpose
Heading	Introduce the question
Paragraph	Develop one connected idea
Table	Compare related items
